

PROJECT: Lab Refurbishment

Location: Sittingbourne

Value: £220K

Timescale: 14 Weeks

The client

BBI Solutions has served the global diagnostics industry for over 50 years, as a leading developer and manufacturer of raw materials and finished test platforms for the in-vitro diagnostics market.

The brief

To strip out and refurbish several laboratories at the Sittingbourne site and create an extension to the Lab D Block.

Project delivery

We stripped out the existing internal fittings, redecorated and fitted new flooring, ceilings and furniture.

The project also involved a substantial amount of mechanical and electrical work, as well as new laboratory equipment and industrial freezers. Whilst on site a presence of asbestos was found in Block A. Our team arranged for this to be safely removed, leaving a clean working environment.

With the assistance of the facilities team based on site in Sittingbourne, we were able to deliver this project to the high expectations and clinical standards required within the pharmaceutical industry - and the high expectations of BBI Solutions.
